# Stormwater Pollution Prevention

## Tips for Fueling Stations

### Areas of Concern:

- Emergency Response Plans
- Know Storm Drain Locations
- No "Topping-Off"
- Uphold Cleanliness and Order
- Keep Suitable Clean-up Material.

# Did you know?

**Storm drain water is  
NEVER treated.**

## Stormwater 101

Clean wetlands and healthy streams are important to Davis County. The water from parking lots, driveways, and streets flow into the storm drain which goes untreated into the streams, wetlands, and eventually enters the Great Salt Lake. Pollution entering the storm drain makes the waterways unsafe for people and wildlife. Following these management practices will prevent pollution, comply with regulations, and protect public health.

### Emergency Spill Response Plan

Maintain an Emergency Spill Response Plan. Keep employees trained in spill response procedures.

### Know Storm Drain Locations

Locate storm drains on or near your property. Know the sources of pollution from your business and do not allow materials to flow into the drains

### No Topping-Off

Encourage customers to not top-off their fuel tanks by posting “No Topping-Off” signs

### Uphold Cleanliness and Order

Uphold cleanliness and order of the site by keeping waste picked up and regularly sweeping the parking and fueling areas

### Keep Suitable Cleanup Material

Keep suitable cleanup material at the site for prompt cleaning of all spills

- Absorbent materials like spill pads, rags, kitty litter, or sand will be effective in containing certain spills
- Do not wash any spills into the gutter or storm drain
- If the material spilled is hazardous, dispose of the soiled absorbents in the same manner as hazardous waste. If the material spilled is not hazardous, dispose of these items in the trash.

*Operate fueling areas so that spills can be contained and runoff cannot carry spills into the street, gutter, or storm drain.*
